Now let's take Your Website's Traffic Tem- perature

Your website is the keystone of your online marketing efforts. If some aspect of your website isn't performing, or if your targeted audience can't find it, all your online efforts will suffer.

This next section will take a quick snapshot of your website's current temperature, i.e. how HOT or COLD it is in relation to three elements of performance:

- A. On Page Optimization
- B. Sales/Lead Conversion
- C. Stickiness & Interactivity

With this information, we'll be able to fine-tune not only your website's traffic, but its ability to convert that traffic into meaningful revenues.

On Page Optimization

Your on page optimization are those elements that are included in your source code and your viewable text to encourage search engines to visit, index, and highly rank your web pages. We want to get an idea of how well your website is currently opti-

Check off all the optimization elements or tasks you currently implement on your website:

- Keyword Optimized Content
- Unique, Keyword Targeted Title for each page

Sales or Lead Conversion Analysis

Do you track your sales and leads, where they come from, what they responded to, and how much they're worth? How often do you split test your various marketing and conversion elements—such as copy, headlines, placement, colors, offers, and pricing?

Getting traffic to your website will only benefit your company if you can optimally convert that traffic into revenue. We can help you increase your current conversion ratios by at least 37%. Many clients see an increase of 75% or more.

Let's look at how well you're currently testing and tracking your marketing and conversion elements so that we can later discuss ways to increase your conversion rates.

Part One. Testing.

Identify which elements you currently test on your sales page, lead acquisition page, or other marketing/conversion pages:

- Headline
- Font or Background Colors/Typeface
- Text Variations
- Offer
- Guarantee or Discount Offer
- Subscription Form & Button Type
- Sub Headers
- Photos
- Pricing
- Layout

Part Two. Tracking.

Identify which elements you currently track for each visitor:

- Referrer URL (where visitor came from)
- Entry Page
- Exit Page
- Length of Time On-Site
- Offer Responded To (if visitor takes an action on your site, do you know which offer he responded to?)
- Specific Offer Iteration (if you provide the same offer or call to action in more than one place on your website, do you know which iteration resulted in the action?)
- Visitor Feedback (do you provide

Stickiness and Interactivity

A site's stickiness is determined by how often visitors return to your site and how long they remain there. Stickiness is important for several reasons. First of all, the more exposure your visitors have to your company and its offerings, the more likely they are to purchase from you.

Secondly, if you choose to sell advertising on your website, or you choose to partner with another company to offer their products or services to your site visitors, the length of time your visitors remain on your site, and how often they return, will factor largely in your negotiations.

In advertising, stickiness is often referred to as "Depth of Engagement."

Interactivity is also important—to build a trust and rapport between your company and its visitors. This encourages repeat sales, loyal customers, and positive word of mouth.

Let's look at how your website currently approaches stickiness and interactivity and then we'll look at how you'd like to turn up your site's temperature in this area.
